This set is the new standard for Roman coinage from its beginnings in the 3rd Century B.C. through the 5th Century A.D. This set should be in the library of anyone who collects Roman coins. The 4th volume specifically deals with the coinage from 284 through 337

A.D., from emperor Diocletian through Constantine, a period when Roman coinage changed significantly. 2 of 2 people found the following review helpful. All of Sear's Ancient Coin reference books are WELL worth the investment. By Alegandron I have used David Sear's ancient coin authentication service as well use his books for reference. This reference is exactly what is needed for ancient Roman coins during this time period. I focus on Roman Republicans in which his Vol I covers extremely well. However, I am expanding into coins in the Early Empire period, which This Vol II covers. As I catalog my coins I use Sear's numbers to reference, although he cites all the other references with each of the listings. Excellent reference book. Period. 0 of 0 people found the following review helpful. Fantastic for collectors of ancient coins because it has loads ... By Maryanne Martin Fantastic for collectors of ancient coins because it has loads of photos of coins with descriptions. I found it very hard to find such a book as this, and the price won't break your bank..
