Kirstin Dow, Thomas E. Downing : The Atlas of Climate Change: Mapping the World's Greatest Challenge before purchasing it in order to gauge whether or not it would be worth my time, and all praised The Atlas of Climate Change: Mapping the World's Greatest Challenge:

This highly acclaimed atlas distills the vast science of climate change, providing a reliable and insightful guide to this rapidly growing field. Since the 2006 publication of the first edition, climate change has climbed even higher up the global agenda. This new edition reflects the latest developments in research and the impact of climate change, and in current efforts to mitigate and adapt to changes in the world's weather. The atlas covers a wide range of topics,

including warning signs, vulnerable populations, health impacts, renewable energy, emissions reduction, personal and public action. The third edition includes new or additional coverage of a number of topics, including agreements reached in Copenhagen and Cancun, ocean warming and increased acidity, the economic impact of climate change, and advantages gained by communities and business from adapting to climate change. The extensive maps and graphics have been updated with new data, making this edition once again an essential resource for everyone concerned with this pressing subject.
