Two of the most important considerations in the practice of internal medicine are the formulation of the differential diagnosis and the recognition of precise criteria upon which to base a specific diagnosis. "The Medical Book of Lists" provides students and clinicians with a convenient white coat pocket-size source of potential differential diagnoses. With a wealth of over 310 lists and tables, readers can use Greenberger as a quick reference to "jog" their memory, organize their thoughts, clarify their intended approach, or double-check their work.
